Purpose of this Guide

The purpose of this guide is to cover all threats to aircraft. This includes all SAMs, ground threats, ships and aircraft.

Thank you to the Hoggit community and everyone who gave their feedback and helped make the guide complete.

See you in the skies.

RWR SYSTEMS

BLUFOR Threat Display - A-10, F-5, F-15, F-16, F-18

The BLUFOR RWR displays radar warning threats being received by your aircraft. Your aircraft is located in the very centre of these circles. The closer the threat is to the centre of the circle the greater the threat to you. The threats position around the circle represents approximately where that threat is coming from. The display does not convey distance to threat, only the greatest threat to you. If an **F** is shown in the centre, the RWR has failed.

PRIMARY THREAT

THREAT IS TRACKING/LOCKED ON YOU

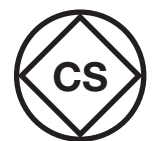

NEWEST THREAT DETECTED

AIRBORNE THREAT

EXAMPLES:

S-300 Clam Shell is tracking/locked on to you and is the primary threat.

SA-3 Flat Face is the newest threat detected but not the primary threat. It is not tracking you.

OUTER RING

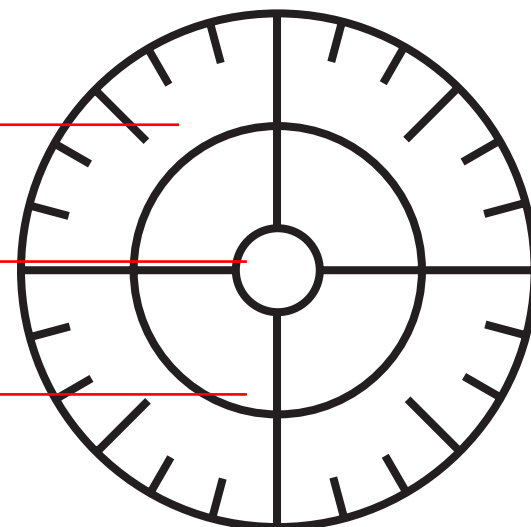

Threat lower risk.

CENTRE

Your aircraft.

INNER RING

Threat higher risk.

AUDIBLE WARNINGS

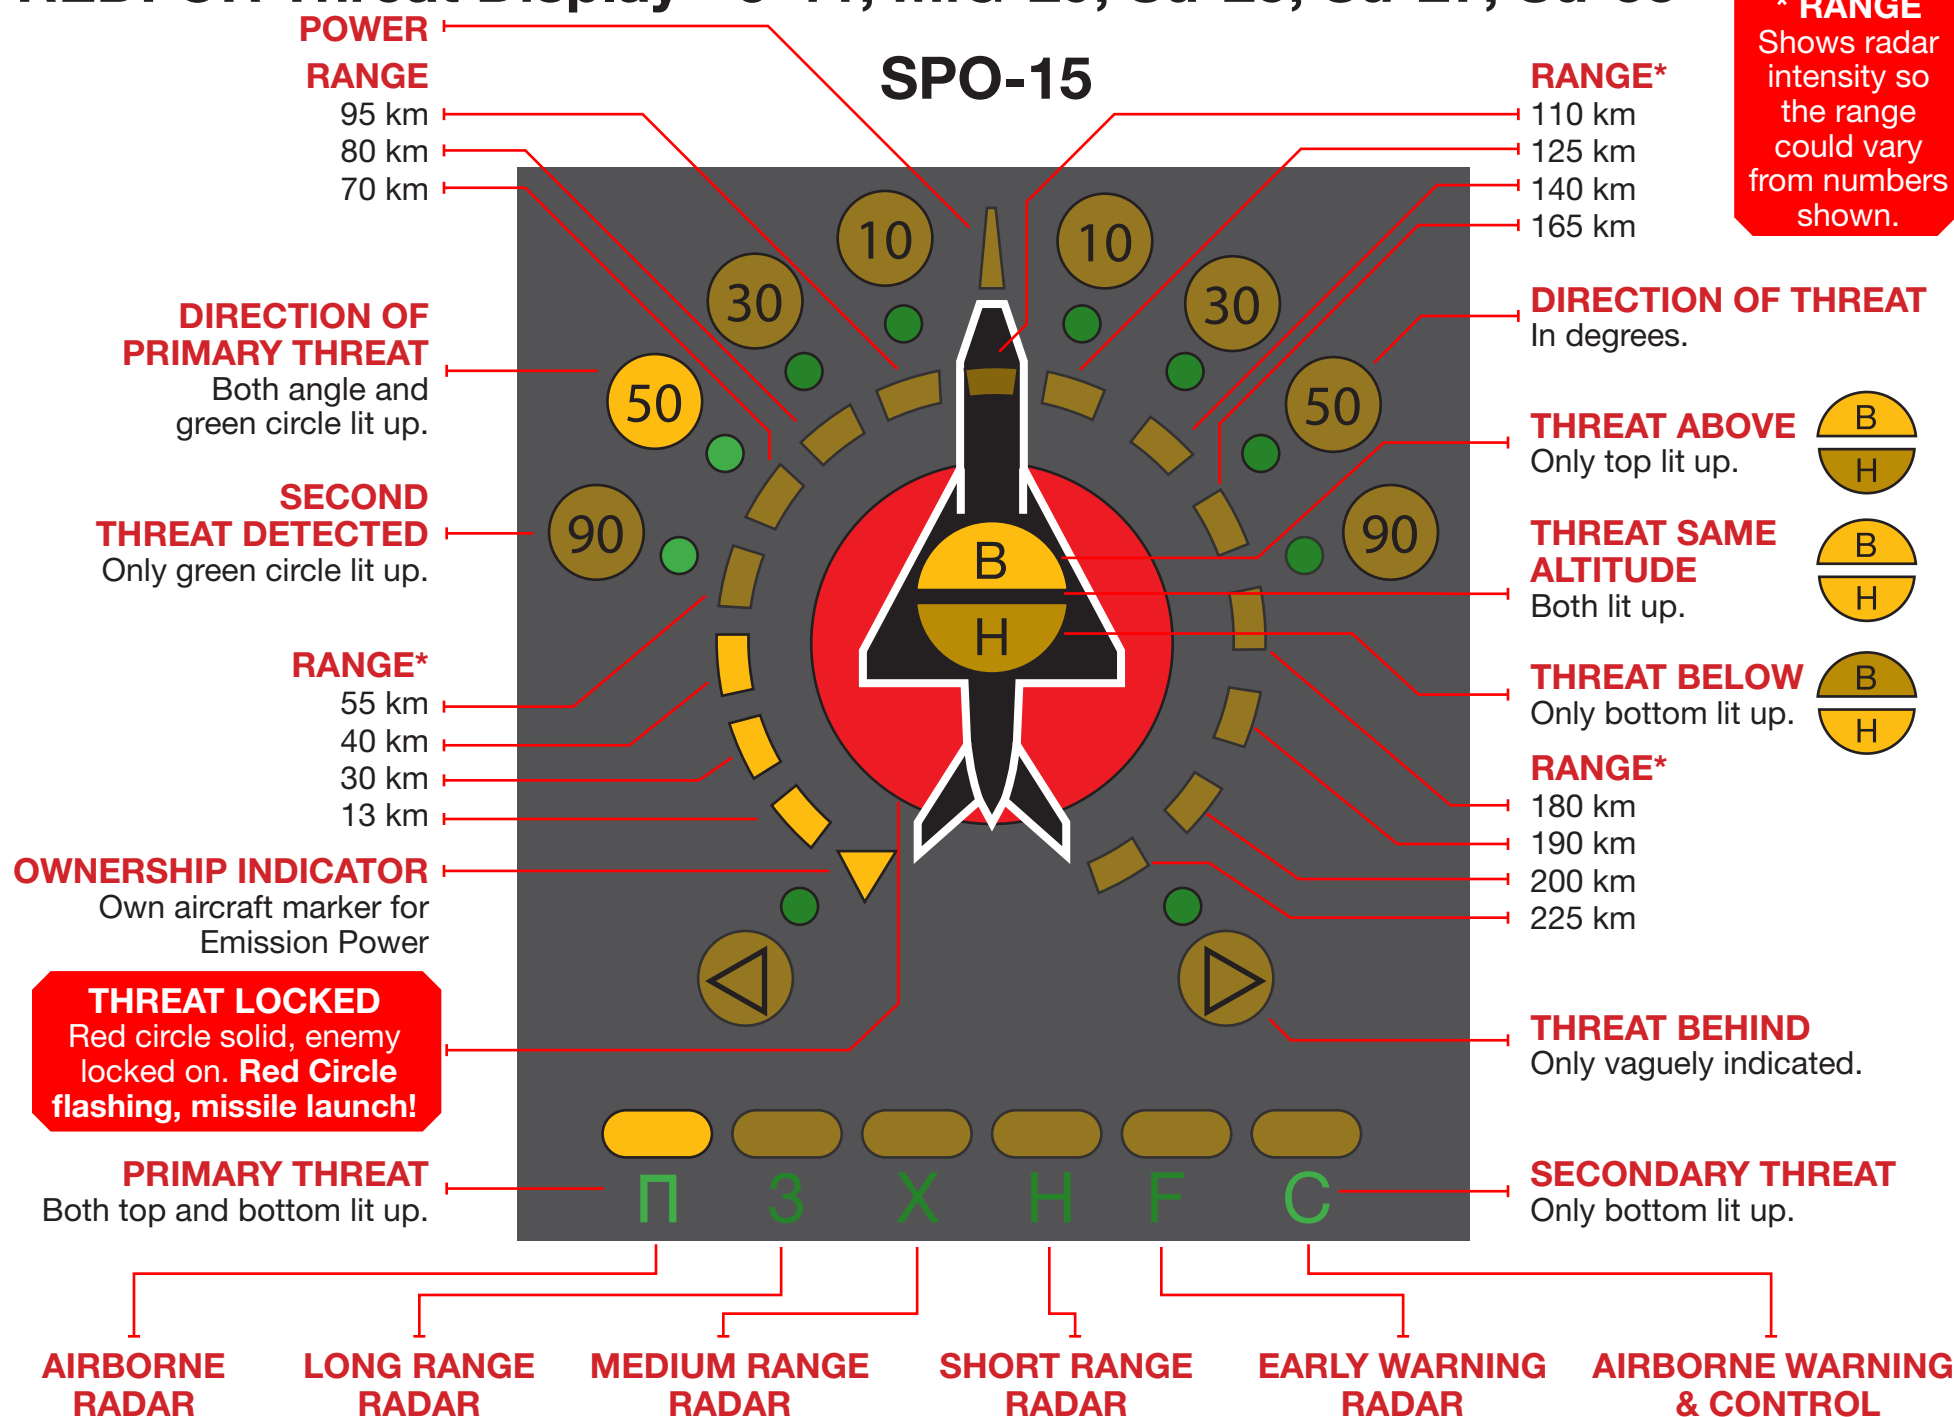

SINGLE BEEP - A new ground or sea based emitter has been detected.

DOUBLE BEEP - A new airborne emitter has been detected.

REPEATING BEEP - An emitter is tracking.

FAST REPEATING BEEP - An emitter is guiding a missile or is a missile.

REDFOR Threat Display - J-11, MiG-29, Su-25, Su-27, Su-33

GROUND THREAT DEFENSE

Defending against ground threats entirely depends on the threat and its capabilities. The best options are usually:

- Keeping outside the threat launch parameters.
- **Cranking** and **Notching** incoming missiles.
- Using **ECM** to get closer to the threat.
- Using terrain masking and defense when necessary.

LONG RANGE MISSILE DEFENSE

When defending against longer range missiles, always **Crank** by turning approximately 90° to the incoming missile, drop **Chaff** and lower your altitude. This can make it harder for the missile to discern you from the ground. Then either **Skate** or **Beam**.

ECM can also improve survivability, making it harder for enemy threats to lock on to you.

SHORT RANGE MISSILE DEFENSE

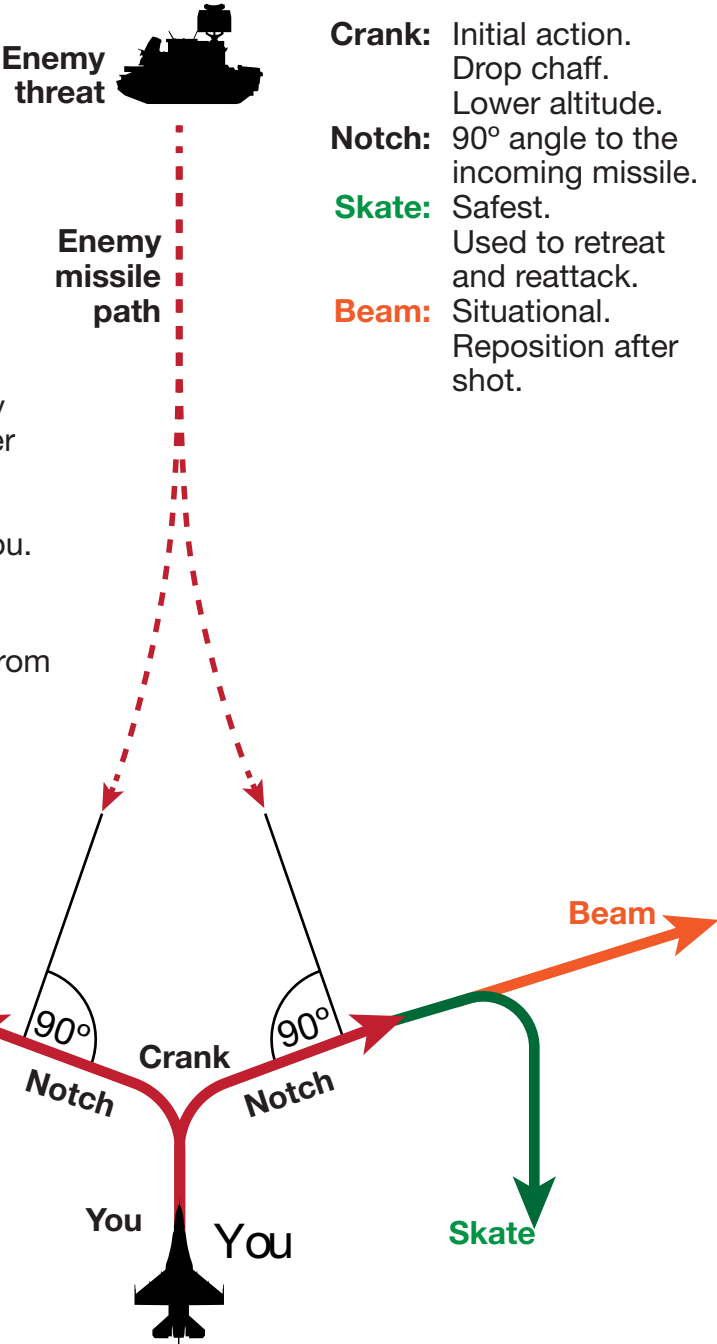

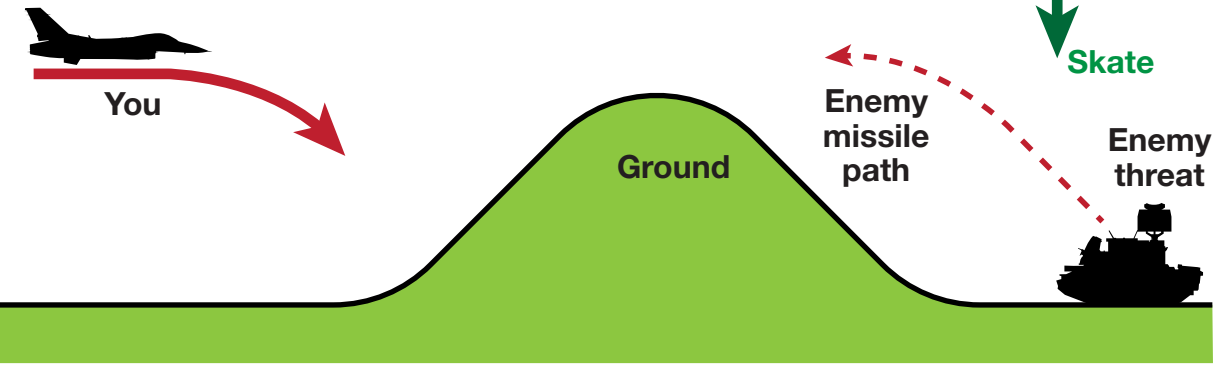

When defending against short range missiles, turn hard and drop **Flares**. Move away from the threat, dive for the ground and in some instances, move chaotically.

GUN DEFENSE

When defending against enemy Anti-Air. Move away from the threat, dive for the ground and move chaotically to make tracking you more difficult.

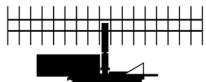

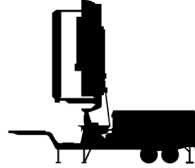

TERRAIN MASKING & DEFENSE

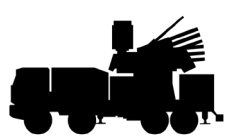

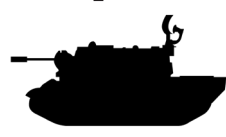

When possible, put the terrain between you and the enemy missile.

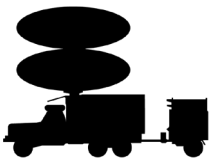

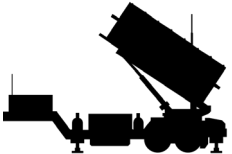

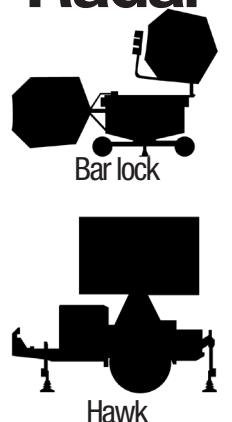

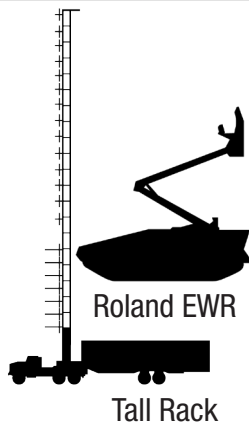

GROUND THREATS

THREAT LEVEL ■ HIGH ■ MEDIUM ■ LOW

SYSTEM	RWR	THREAT	RANGE(nm/km)	HEIGHT (ft/m)	LOCK(s)	DEFEND	DEFEAT
1L13 Box Spring  5G66 Tall Rack 		LOW	194/360	65K/20K	N/A	Evade	1 HARM
	HARM ID		SYSTEM	ADDITIONAL INFORMATION			
	Search 101		NEBO	Russian. 1982. A VHF band early warning radars. Box Spring: This designation is associated with the 1L13-3 Nebo-SV and its modern, 84-element folding AESA derivative, the 1L119 Nebo-SVU (or Nebo-M). These are self-propelled, mobile, multi-band radar complexes that can stow and deploy in 20 minutes to support Surface-to-Air Missile (SAM) batteries Tall Rack: This designation refers to the 55Zh6 Nebo, the first Soviet VHF-band 3D radar capable of measuring height, range, and azimuth, passing trials in 1982. It is a large, high-powered, land-based, early-warning system.

AIR THREAT DEFENSE

Defending against air threats falls into 3 categories. Long range missile defense, short range missile defence, gun defense.

SHORT RANGE MISSILE DEFENSE

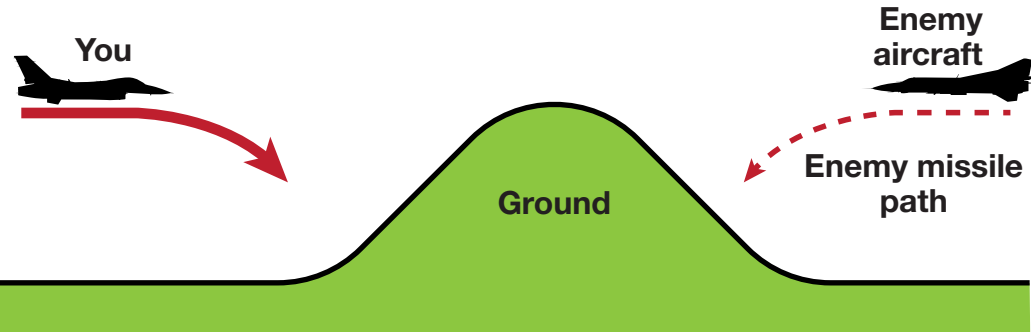

When defending against short range missiles, turn hard and drop **Flares**. Try to maintain visual on the enemy. How and where you turn depends on the situation, the missile and more.

GUN DEFENSE

When defending against enemy aircraft gun shots, try to maintain visual on the enemy, turn chaotically to make it harder for the enemy to know where you will be and watch the enemy for gun shots and gink accordingly. How and where you turn depends on the situation, the missile and more.

TERRAIN DEFENSE

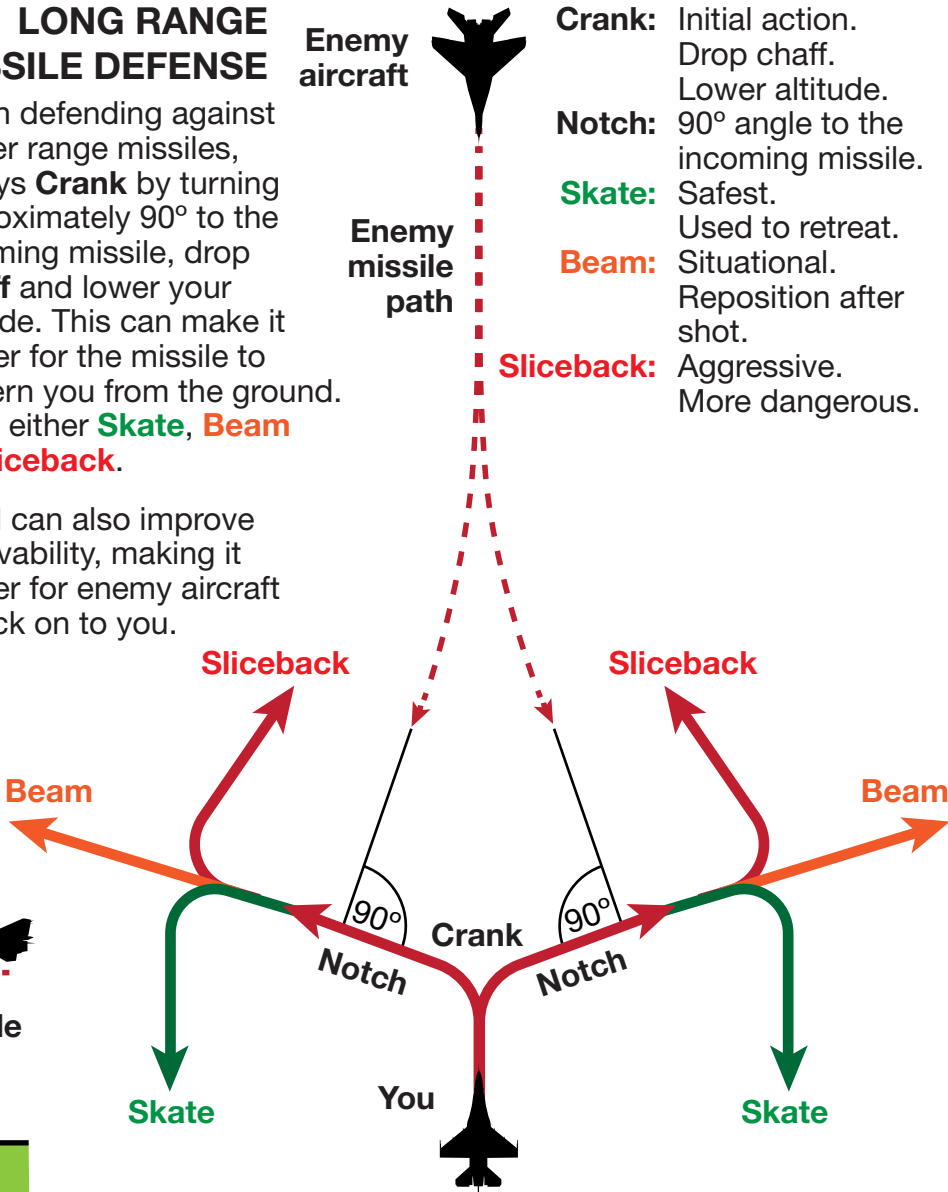

When possible, put the terrain between you and the enemy missile.

LONG RANGE MISSILE DEFENSE

When defending against longer range missiles, always **Crank** by turning approximately 90° to the incoming missile, drop **Chaff** and lower your altitude. This can make it harder for the missile to discern you from the ground. Then either **Skate**, **Beam** or **Sliceback**.

ECM can also improve survivability, making it harder for enemy aircraft to lock on to you.
